

KODAK Miniloader 2000 and 2000P Roomlight film handling in-house or on the road

The space-saving Kodak miniloader 2000 and 2000P automatically load and unload Kodak Min-R 2 cassettes in full roomlight in just seconds. Now you can spend less time in the dark and more time with your patients.

Take your choice of two configurations:

- The Kodak miniloader 2000P automatically processes exposed films with an integrated Kodak Min-R mammography processor for easy image access and consistent image quality. For maximum convenience, it can also be equipped with a darkroom film feeder, and is suitable for van installation.
- The Kodak miniloader 2000, with its lightweight receive magazine and small footprint, is ideal for van installation when on-board film processing is not required.

Kodak

Kodak miniloader 2000 and 2000P—Features to meet your every need

Lightweight receive magazine

Weighing only 1.4 kg (previously 4.2 kg), the lightweight receive magazine is designed to increase technologist comfort and satisfaction. In addition, the receive magazine improves workflow with a serial unload feature. High-quality images are assured with its light-tight design—no need to go to the darkroom to transfer films.

2000P can serve a darkroom, too

Gain added cost savings and productivity by also processing films from an adjacent darkroom with optional through-the-wall feeding.

- Eliminate the need for a separate darkroom processor
- Simplify sensitometry procedures

A system that works for you

Use the Kodak miniloader 2000/2000P with Kodak films, screens, cassettes, and equipment for mammography to help your facility maintain the highest standards of performance and care.

A Kodak miniloader 2000P requires the purchase of a mounting stand for the Kodak Min-R mammography processor.

Specifications

Cycle time

12 to 15 sec., depending on film size and magazine position

Dimensions

2000 configuration for mobile units

Width: 55 cm +/- 1 cm /21.6 in.
