

REFSIX

The app for referees

What is REFSIX?

REFSIX is a smartwatch and mobile app for referees that helps them manage their career. The app covers three areas:

Administration: REFSIX speeds up administration for referees, by using their mobile to log fixtures and team sheets and their watch to record key match incidents in games like goals, cards and subs.

Timing: REFSIX is the most customisable timepiece for football referees ever. Referees can choose from 108 different configurations to view and manage time during matches.

Performance: During matches REFSIX tracks physical statistics about the referee, including distance covered, data around their positioning and speed.

Administration

REFSIX speeds up administration, by digitising the process of recording fixtures, team sheets and key match incidents.

Pre-Match: Prior to the match, referees can upload their matches with the ability to customise team sizes, number of subs, number of periods, length of each half and the half time interval as well as select if they wish to record goalscorer or not. When the referee arrives at the match and receives the lineups they can quickly add these to their app and then send all the data to their smartwatch.

Administration

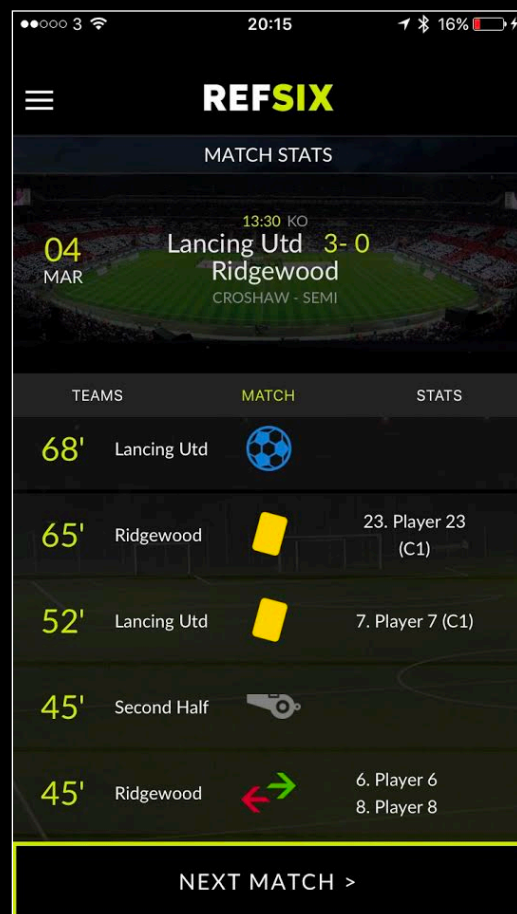

In-Match: During the match referees use the REF*SIX* smartwatch app to keep track of time, as well as record match incidents in real-time. Referees can record who kicks off, goals, scorers, yellow and red cards with reason codes and substitutions.

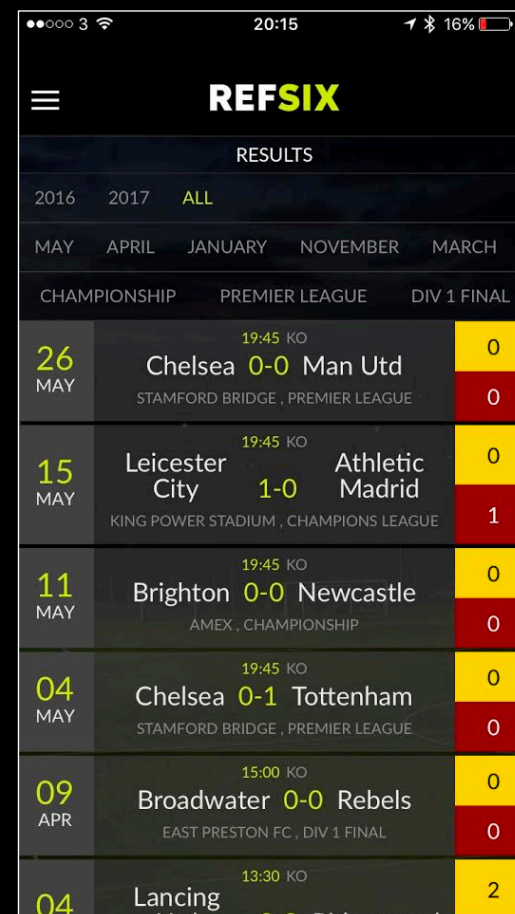

In-Match

Administration

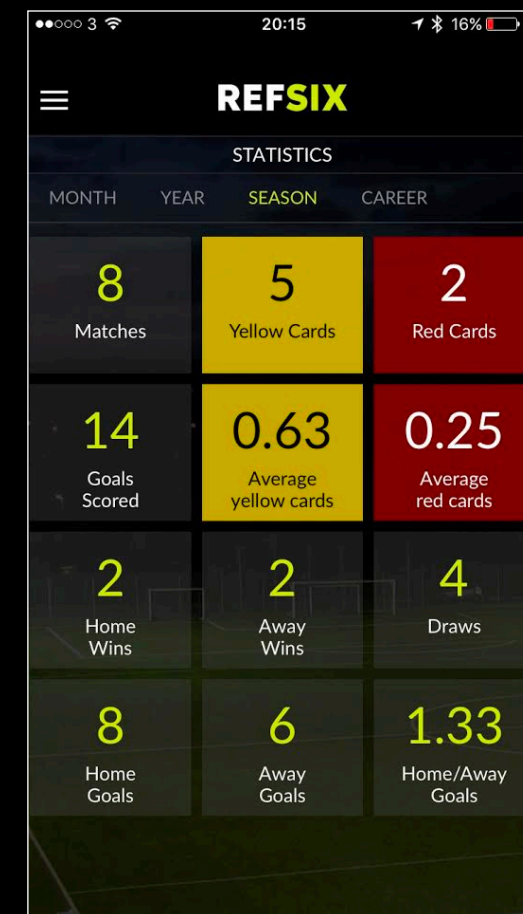

Post-Match: After the match referees can view all match incidents on their mobile phone, view statistics of individual games as well as statistics an aggregated view of their season on individual competitions or across all.

Timing

REFSIX can be used to keep a track of time in matches with over 100 potential combinations for referees to select.

Timers: REFSIX has 4 different timers that can be selected across 2 layouts depending on the referees preference. The different timers include a countdown timer, a countup timer which both start and stop as well as an elapsed timer that counts every second from kick off and an additional time timer to record any stoppages in play. The app also has a half time interval timer.

Configurable: There are other configurations that also allow the referee greater flexibility in the way they manage time, enabling the half time timer to start as soon as the first half finishes and the second half to start at 0, or from 45 (or whatever the half length was set as). The progress bar allows referees to quickly glance at the screen to see how far in to the half they are.

Performance

REFSIX tracks a variety of performance data of the referee during matches including GPS, speed, heart rate and distance.

Insight: REFSIX provides grassroots referees with elite level performance tracking data. This data can provide referees and their coaches with greater insight in to their performance. Helping them identify areas to develop and improve.

Individual/Aggregated: Referees can analyse their data per game or see an aggregated view across a period of time to see trends.

Coach App

- It allows coaches and mentors to see match data from their referees straight after the game.
- As soon as referees add fixtures the coach is able to see them on their dashboard.
- When a referee downloads the match data from their watch to their mobile, it can be instantly seen on the coach's app.
- Coaches can see all data including match incidents, team sheets, as well as performance statistics.

Benefits

REFSIX benefits a wide range of stakeholders in the game:

For Referees: REFSIX helps referees achieve their goals by helping them monitor their career and performance. By analysing their performance, referees can optimise their development programs, ensuring they are continuously improving and striving for excellence whilst also giving them a greater chance of getting promoted.

For Referee Coaches: Referee's Coaches can view data on their referees and provide further support and advice to help them progress and develop as well as help them identify talented referees.
