

World Triathlon Corporation Anti-Doping Program

2013 Program Statistics

World Triathlon Corporation (WTC) announces their 2013 Anti-Doping Program Statistics. A total of 520 doping control tests were carried out under the jurisdiction of the WTC in 2013. Of those tests, 259 were performed in-competition, and 261 were out-of-competition (OOC) tests.

The WTC Anti-Doping Program continued the important focus on the Athlete Biological Passport (ABP) conducted in conformance with the WADA Athlete Biological Passport Operating Guidelines. Of significance, the WTC continued to collect ABP samples as part of over 95% of its Out-of-Competition tests; collecting a total of 251 ABP blood samples. The WTC's efforts account for approximately 20% of the total ABP testing conducted in the sport of Triathlon worldwide according to 2013 Testing Figures published by the World Anti-Doping Agency. The WTC continues to work with the Salt Lake Medicine Research and Technology Laboratory (SMRTL) to provide scientific oversight of their ABP efforts.

The WTC's comprehensive testing program coordinates planning and results with key National Anti-Doping Agencies Worldwide. This collaboration is critical to successful and strategic deterrence and detection as well as to minimizing the duplication of efforts. To this end, the WTC utilizes the ADAMS (*Anti-Doping* Administration and Management System) for management of its testing program, ABP and Athlete Whereabouts.

Following is a summary of specific WTC anti-doping statistics for 2013

	WTC Events Tested	In-Competition Tests	Out-of-Competition Tests
2013	37	259	261

Further statistical details and comparisons are available in the [2013 WADA Anti-Doping Testing Figures](#).
