## Profiling New 800m Runners

- Type I - "The Long Sprinter"
- 800m/400m Type
- Type II - "The Speedy Distance Runner"
- 800m / 1500m Type
- -1500/3kType (utilized for relays)
- Red Flags
- 200m > 1500m

## Profiling Good 800m Runners

- Type I - The 1500 m is your secondary event
- Type II - The 1500 m is NOT your secondary event ... yet.

## Training Theory

- Aerobic Development
- O2 Delivery
- RBC Mass
- Mitochondrial Density
- Enzyme Production
- Fuel Utilization
- VO2max Development
- Higher maximal O2 consumption
- a-v O2 Difference x Cardiac Output (HR x SV)
- $\mathrm{vVO} 2 \mathrm{max}=10$ minute time trial *80om is run at ~120\% of VO2max
*8oom is runat ~120\% ofVOz
- Lactate Threshold Development
- Higher percentage of VO2max
- Typically 50-80\% of VO2max
- Running Economy
- Outside Factors

## General Guidelines

- General to Specific
- Simple to Complex
- Volume to Intensity
- (Aerobic to Anaerobic)
- 25\% Long Run
- Be patient/Check your ego
- "Play chess, not checkers"

## LIFTING

| Hormone | Stimulant for Release | Target Tissue | Response |
| :---: | :---: | :---: | :---: |
| Epinephrine | Moderate to intense exercise, stress, hypotension | Skeletal muscle | $\uparrow$ Glycogenolysis (breakdown of glycogen), vasoconstriction |
| Norepinephrine | Moderate to intense exercise, hypoglycemia | Adipose tissue, liver | $\uparrow$ lipolysis (breakdown of fat), $\uparrow$ heart rate, $\uparrow$ glycogenolysis |
| Growth Hormone (GH) | Exercise, hypoglycemia | Skeletal tissue, bone, adipose tissue, liver | Stimulation of growth, FFA mobilization, $\uparrow$ gluconeogenesis, $\downarrow$ glucose uptake |
| Testosterone | $\uparrow$ FSH, $\uparrow$ LH, exercise (?), stress | Skeletal muscle, bone | Protein synthesis, sperm production, sex drive |
| Estrogen | $\uparrow$ FSH, $\uparrow$ LH, light to moderate exercise | Skeletal muscle, adipose tissue | Inhubition of glucose uptake, fat deposition |
| Cortisol | $\uparrow \mathrm{ACTH}$, intense prolonged exercise | Skeletal muscle, adipose tissue, liver | $\uparrow$ Gluconeogenesis, $\uparrow$ protein synthesis, $\downarrow$ glucose uptake |
| Insulin-like growth factor (IGF-1) | $\uparrow$ Growth hormone | Almost all cells | Stimulation of growth |

Racing Strategy

## Four C's of Racing 800 meters

- Create Position
- Sprint Start vs. Fast Start
- The Break Line (next slide)
- Cover Moves
- One Chance at the Lead
- Average Position of NCAA Champion
- 400m
- 5.0 MEN
- 1.75 WOMEN
- 600m
- 4.166 MEN
- 1.50 WOMEN
- 400m Leader \& 600m Leader are almost always the same
- Very few men and no women won from beyond 5 th at $600 m$
- Front Running does not work for men, but can work for women

## Four C's of Racing 800 meters

- Challenge for Position
- "Hit them when they can't hit you back"
- Half the race is on the curve
- Lane $2 \times 1$ curve $=0.76 \mathrm{~s}$
- Close the Deal
- Somebody will break
- (Congratulate \& Celebrate)

## Overview

- Put the right athletes in the 800 m
- Adopt the "Orphan Event"
- Create a well-designed training model that covers all limiting factors appropriately
- Implement race tactics specific to the event
