2023 IRONMAN Anti-Doping Program Statistics

As a Signatory of the World Anti-Doping Program, the IRONMAN ADP continues its outreach and education through its I AM True initiative with its testing program, which is the largest, most comprehensive global anti-doping program in long distance triathlon.

A total of 761 samples were collected under the jurisdiction of the IRONMAN Anti-Doping Program in 2023. Of those samples, 98 were collected in-competition, and 663 were collected out-of-competition (OOC).

In 2023, the IRONMAN ADP also continued collecting Dried blood spot samples, both In-Competition and Out of Competition, for a total of 67 samples.

The IRONMAN Anti-Doping Program also continued the important focus on the Athlete Biological Passport (ABP), conducted in conformance with the WADA Athlete Biological Passport Operating Guidelines. The IRONMAN ADP collected a total of 227 ABP blood samples.

The IRONMAN Anti-Doping Program works with the Salt Lake Medicine Research and Technology Laboratory (SMRTL), in its capacity as the programs designated Athlete Passport Management Unit, to provide scientific oversight. The IRONMAN ADP’s comprehensive testing program coordinates planning, intelligence, and results with key Anti-Doping Agencies Worldwide. This collaboration is critical to successful and strategic deterrence and detection as well as to minimizing the duplication of efforts. The IRONMAN ADP utilizes the ADAMS (Anti-Doping Administration and Management System) for management of its testing program, ABP and Athlete Whereabouts and to ensure transparency and WADA’s ongoing monitoring of reporting and results.

The WADA Anti-Doping Testing Figures reports should be consulted for detailed testing statistics pertaining to the IRONMAN Anti-Doping Program and worldwide anti-doping efforts in IRONMAN and the sport of triathlon.
