

Concession Stand Cleaning Shift Instructions

The cleaning shift is intended to be a concession stand deep clean, ensuring a weekly thorough cleaning even though nightly cleaning should also be done.

Dishes – Follow directions on dispenser above the sink. Left sink is for washing only, center sink is for rinsing only and right sink is for sanitizing only. Dispenser mixes chemical with water automatically. Just press and hold button according to which sink you are using. Center sink rinse water uses the regular sink faucet.

Carefully take apart dispensing cups from inside of hot chocolate/cappuccino machine. Wash thoroughly (they get really plugged up) and reassemble in machine when dry. To open machine, there is a little stopper on the front right-hand side. The front door panel opens to show the internal parts.

Wash any drip trays from hot dog roller, coffee maker, hot chocolate machine, popcorn maker and fryer.

Wipe down walls, concession windows and door using the washing solution. Wipe down walls on outside of concession stand too if dirty.

Wipe off grime from machines. Wipe down dust from tops of machines too. Tops of pop coolers are not necessary to wipe down, we'll use a ladder and clean those.

Wipe down counters using the washing solution and a clean rag. Make sure to wipe down counters on outside of windows too.

Spray sanitizing spray on counters when done, let stand for 60 seconds then either air dry or wipe dry.

Sweep floor getting behind as many machines as you can reach. Dust builds up quickly.

Mop floor filling the mop bucket with the dispenser in the mopping bay. (Press and hold button and pre-mixed chemical is dispensed) Get in between tables and as much as you can reach.

Mop on the outside of the concession too if you notice spills and messes left over from the weekend.

Break down all boxes and take them out with trash to the dumpster behind the CWR rink. Use the pink cart to haul refuse out. Walk alongside the CWR rink and use the set of doors under the scoreboard. Prop door open with block of wood that is there otherwise it locks and you'll have to walk all the way around. Remove block of wood when you're back in the building and make sure doors close all the way by pushing on them to make sure they stay shut.

Thank you for helping us keep the stand clean!
