

Caze Concussion Institute

A concussion is a type of mild traumatic brain injury that results from a bump, blow or jolt to the head. Concussions can also occur from a powerful force applied to another area of the body that causes the head and brain to move quickly back and forth. Even a mild bump or blow can be serious and cause significant injury. Loss of consciousness is not required to be diagnosed with a concussion.

Signs & Symptoms of Concussion

The following signs and symptoms can show up immediately following an injury or may not appear for days to weeks following the injury:

- Headache or “pressure in the head”
- Problems of dizziness, moving clumsily
- Double or blurry vision
- Sensitivity to light or noise
- Concentration or memory problems
- Answers questions slowly • Forgets instruction
- Feeling confused, sluggish, hazy, foggy or groggy
- Appearing dazed or stunned
- Mood, behavior or personality changes

If your child is experiencing any of the following signs and symptoms, please take them to the Emergency Room:

- Increasing drowsiness or cannot be awakened
- Repeated vomiting
- Headache that worsens and does not go away with rest
- Slurred speech
- Weakness, numbness or decreased coordination
- Convulsions or seizures
- Increasing confusion, restlessness, agitation or unusual behavior

To expedite recovery and treatment it is recommended to schedule with a concussion specialist directly following injury. Caze Concussion Institute is committed to seeing patients within 24 hours of contacting scheduling.

Dr. Caze is one of the first sports neuropsychologists to complete a 2 year fellowship in pediatric concussion. Our commitment to early access specialty care means the safest recovery for your child, all while ensuring no long-term impacts from injury.
