

MARCH 1, 2024

Respiratory Virus Guidance

WHAT TO KNOW

Each year, respiratory viruses are responsible for millions of illnesses and thousands of hospitalizations and deaths in the United States. In addition to the virus that causes COVID-19, there are many other types of respiratory viruses, including flu and respiratory syncytial virus (RSV). The good news is there are actions you can take to help protect yourself and others from health risks caused by respiratory viruses.

CDC's Respiratory Virus Guidance

This guidance provides practical recommendations and information to help people lower risk from a range of common respiratory viral illnesses, including COVID-19, flu, and RSV.

CORE STRATEGIES

Core Prevention Strategies

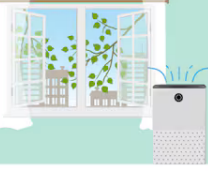

Immunizations

Hygiene

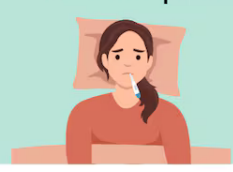

Steps for Cleaner Air

Treatment

Stay Home and Prevent Spread*

ADDITIONAL STRATEGIES

Additional Prevention Strategies

Masks

Distancing

Tests

Layering prevention strategies can be especially helpful when:

- ✓ Respiratory viruses are causing a lot of illness in your community
- ✓ You or those around you have risk factors for severe illness
- ✓ You or those around you were recently exposed, are sick, or are recovering

***Stay home and away from others until,**

Your symptoms are getting better

and

You are fever-free (without meds)

for 24 hrs

Then take added precaution for the next 5 days

Special Considerations

In addition to CDC's Respiratory Virus Guidance, there are several special considerations for people with certain risk factors for severe illness.

Risk Factors for Severe Illness from Respiratory Viruses

- [Older Adults](#)
- [Young Children](#)
- [People with Weakened Immune Systems](#)
- [People with Disabilities](#)
- [Pregnant People](#)

Treatment as Prevention

Treatment is a core prevention strategy to lower risk from respiratory viruses.
