

Non-Chemical Cleaner

Mechanical Cleaning vs Chemical Cleaning

NORWEX products physically remove the bacteria and residues from surfaces. (NOTE: Watch Videos to view how NORWEX works). NORWEX products mechanically remove vs. chemically "kills" bacteria. When bacteria is killed, the bacteria is left on the surfaces and the majority of cleaning chemicals are harmful. A pertinent analogy is if you had two glasses of water and one glass had the bacteria removed from it and the other one just "killed" the bacteria in it, but left it in the glass which glass would you drink from?
